

Application No.: 10/658,300

Docket No.: 030296

IN THE Abstract

An apparatus for providing electrical coupling, comprising a motor having a hollow, rotational shaft; and, in on one embodiment, an electrical conductor located with said shaft for providing electrical signals through the motor. The shaft is disposed coaxially with an antenna horn which is rotatable about the shaft. The axis of the shaft extends through a plane of rotation defined by the antenna horn.
